

Haulage & Disposal of Waste

Mantank Environmental Services Limited are specialists in the removal and disposal of hazardous and non hazardous waste including liquids, powders, dusts, sludges and dry waste.

We are registered waste carriers and as such operate with DGSA qualified managers in accordance with the latest Carriage of Dangerous Goods by Road Regulations and European ADR Regulations. We also operate with a duty of care under the Environmental Protection Act to ensure that all waste is disposed of in accordance with all current legislation.

Our modern fleet of vehicles are managed by our CPC qualified transport manager and are all maintained by franchise trained technicians in house. All vehicles are manufactured to transport most hazardous & non hazardous waste, are fitted with the appropriate hazchem marker plates and contain fire extinguishers and first aid equipment.

All our drivers are ADR trained in the transportation of dangerous & non dangerous goods and all carry PPE in accordance with the ADR regulations.

Drums Packages IBC'S

Our Tautliners can carry packages, drums, and IBC's with payloads of up to 24tonne. Our 7.5 tonne vehicle is ideal for use where access is restricted or a small load is to be removed. If required tail lift facilities are available on a selection of our tautliners removing the need for fork lift trucks.

Solids/Sludges

Our fleet of liquid ring pump vacuumation units are able to transport a wide range of bulk sludges and solids. They utilise high performance liquid ring vacuum pumps producing 1900cfm and 90% vacuum which allows the tanker to be used with 6" to 8" inlets and outlets to aid with the fast loading and discharging of materials.

They also operate as tipper units with a fully opening hydraulically operated rear door to allow the discharge of solid waste.

Dry Materials

Dry dusty materials including powders, carbons, cements and dusts can all be uplifted and transported using our large capacity dry vacuumation units. Once the dry material has been collected our vacuumation units can either transfer the waste on site or transport off site for disposal. Other dry materials including gravels, sands, soils and general waste can be transported off site using our fleet of skip wagons.

Bulk Liquid

We operate a fleet of waste tankers with barrels manufactured from mild steel and stainless steel. These may be coated with specialist linings which allows the fleet to carry most hazardous and non hazardous liquids. Our vehicles are able to transport up to 28,000 litres of bulk liquid. We also operate smaller vehicles to make the removal of reduced amounts more cost effective.

Our fleet of tankers undergo regular tank tests to ensure the integrity of the tanks conform to the latest regulations.

Disposal

We operate as an independent disposal company and as such can dispose of waste at any disposal facility. This is beneficial as it enables us to be selective and compete on disposal costs.

Where required Mantank will complete all necessary documentation. We operate with a duty of care and will audit disposal sites to ensure they are registered to take the waste specified.
